

Initial Interior Attach Personnel
(Two-In/Two-Out)

PURPOSE:

To ensure the safety and accountability of personnel during interior structural attack.

SCOPE:

Interior attach on an interior structure fire will begin when two firefighters have full protective gear and SCBA donned and operational. The two firefighters inside the structure must have visual or voice contact between each other and direct, voice or radio contact with firefighters outside the structure. Additionally, a minimum of two firefighters will be on standby outside the structure to provide assistance or perform firefighter rescue. These two outside firefighters shall be in full protective gear and have SCBA donned and operational. One of the two outside person's primary functions is to account for, and if necessary, initiate firefighter rescue.

The only exception is for known life rescue.
